

Manipal Hackathon 2026

Team Name: Avatar

Track: Culture And Community

Problem Statement: "Build A Community From Zero: The Fellaride Butterfly Effect"

Solution Title: "FellaFlywheel-community activation and intelligence"

Team Members: Gireesh V Pai, H V Varun Prabhu, Sanvi Anil Kalnad, Deepthi Dongre, Nihal H G

Solution

FellaFlywheel — community activation intelligence

Turn scattered public signals into a practical plan for creating the first meaningful rides.

Technical Implementation

Who can move the network — and what should we ask them to do?

Prioritize network value, not signup probability.

ACTIVATION SCORE

Score is explainable; every factor is visible.

EXAMPLE • UNIVERSITY COMMUNITY

1,240

signals

86

high-potential

17

connectors

9

ride clusters

Example intervention

**“3 colleagues commute toward Whitefield.
Create a recurring ride circle?”**

Feasibility

The moat is the activation graph.

Every successful interaction improves understanding of routes, roles, timing and intervention effectiveness.

COMMUNITY GRAPH

Who connects whom

MOBILITY GRAPH

Who travels where

INTERVENTION MEMORY

What actually works

GROWTH GRAPH

How rides propagate

More rides → better graph → better targeting → more rides

Business Strategy

Engineer the first 5 rides — then let the network compound.

The unit of growth is not a registration. It is a repeatable ride cluster.

THE WINNING IDEA

Find the right first few — not the most people.

SUCCESS METRICS

TIME TO FIRST RIDE

Discovery → completed ride

REPEAT RATE

Another ride within 7 days

REFERRAL PROPAGATION

Active users generated per activated user

CLUSTER DENSITY

Rides per active corridor
